

Career and Technical Education

Policy

We live in a rapidly changing society. It is one of increased complexity, diversity, and technological advance. These conditions demand that school and community work together to provide both the leadership and experiences to give our students the broadest exposure possible to career and vocational education opportunities.

Adequate experiences, activities, and programs will be provided in Career and Technical Education for students from kindergarten through Grade 12.

Career and Technical Education experiences will be provided for all students: those who will enter higher education to pursue a career and those who will enter the world of work upon termination of their high school education.
